## **New Product**

### **SuperFlow 450 Regulator Conversion Kit (Part# 525-766) for Kirby Morgan Helmets and Bandmasks with SuperFlow 350 Regulator**

Divers who wish to upgrade the performance of their Kirby Morgan helmet or Bandmask equipped with the 505-069 or "350" regulator, can now do so with the Regulator Conversion Kit, Part # 525-766. The kit provides all of the parts and instructions needed to install the stainless steel SuperFlow-450 regulator. This product will be shipping on June 15, 2007. (A separate kit, Part #525-763, is available for the SuperLite-27 and is already shipping.)

The SuperFlow-450 regulator (standard on our KM57 helmet) is a high-performance regulator. It provides the following features and benefits:

- Compact design
- Low-profile
- All stainless steel construction
- High-performance breathing characteristics
- Near identical balance characteristics for helmets and masks compared to gear equipped with SuperFlow-350

The conversion from the SuperFlow-350 to SuperFlow-450 is quick and easy. It requires a minimum number of tools and can be performed by any trained Kirby Morgan helmet technician.

***IMPORTANT NOTE: This kit is not compatible with the SuperLite 27 helmet. Order Part #525-763 for a similar kit for the SuperLite-27.***

***This kit is not compatible with the SuperLite 17A/B helmets, or earlier model small tube regulator Bandmasks (pre-'99 KMB-18s and pre-September 2004 KMB 28s).***

For more information, contact a Kirby Morgan dealer near you.

*The 525-766 Conversion Kit includes the regulator assembly, a rubber spacer, three o-rings, and a tie wrap.*
