Bulletin #7 of 2011. October 04, 2011

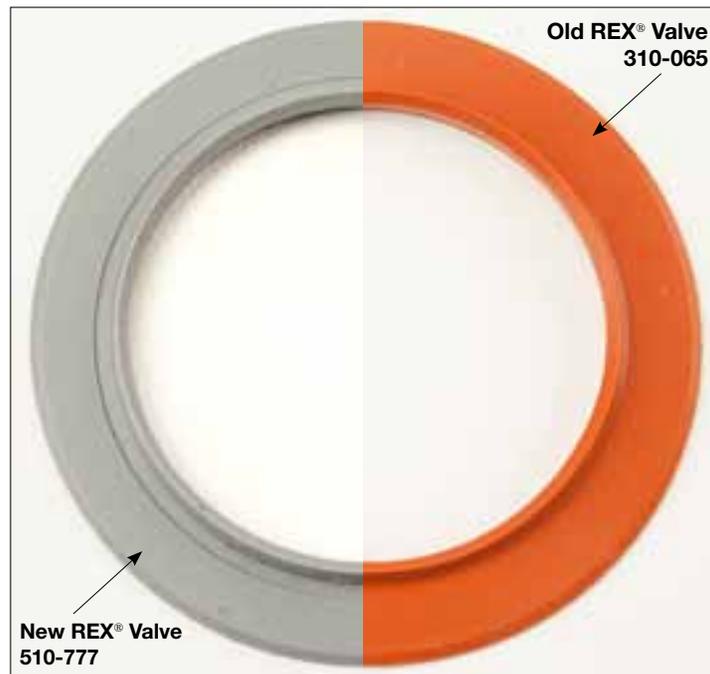

Change To Product Bulletin

REX® Regulator Exhaust Valve Part Number 510-777

Products Affected: KM 47 Helmets 500-070/071, KM 77 Helmets 500-090/091, 505-278, 505-736, 525-377, 525-368.

Under certain conditions, the original regulator main exhaust valve, 310-065, used in the REX® regulator assembly, 505-278 could be susceptible to low exhaust flow oscillations, or “Honking”. Several variables have been found to cause this. A solution to this issue has been found by making a slight modification to the shape of the valves. The new part number is 510-777 and the parts are easily distinguished by the change in color from orange/red to medium GRAY. No change to associated procedures for maintenance of the valve are necessary.

*Note: This valve is **not** for use on the EXO® 26 or EXO® BR Full Face Masks. The EXO® Masks will continue to use 310-065 exhaust valve.*

2011 U.S. Retail Price: \$15.00
